MushLove kits growing instructions:

(ENG)

- 1) Wash your hands and open the MushLove growing kit avoiding any contacts with mycelium content.
- 2) Fill up the kit with water until the mycelium is almost floating ; then close it back and store it in your fridge for about 12 hours .
- 3) Remove the kit from your fridge and get rid of the water in excess , then open completely the box and put it in the bag with the air filter.
- 4) Now just close the bag with the 2 paper clips and keep your kit in an environment with the following conditions:
 - _ Between 20-25 Degrees Celsius.
 - _ No Direct Sunlight on the kit.
 - _ Far from any Heating source .
- 5) If Keeping the right conditions you will start to see your mushrooms pinning out in 7-10 days. When you see them growing open the bag once or twice a day to enable air exchange.
- 6) They'll need other 2 or 3 weeks depending by the strain to be completely ready. When they open their cap you can finally harvest them just by slightly rotating and pulling the bottom part of the stem.
- 7) After the first Harvest, repeat all the process in order to get more flushes.

Our kits (if properly used) allow you to have till 4 different flushes !

Always remember to keep your hands the cleanest possible and not to expose your kit in dangerous contaminating environments . For any questions you can contact us through our e-mail : info@mushlove.nl

Or through our website: www.mushlove.nl
